

Reddit Demand Engine

Reddit-native

Human-approved

Company presentation cheat sheet - listen first, help second, generate demand responsibly.

ONE-LINE PITCH

Helps companies find real customer conversations on Reddit, reply helpfully, and plan posts without looking spammy.

The Problem

Reddit has high-intent customer pain, but companies often fail because they post promotional content, ignore subreddit rules, sound like generic AI, and miss buying signals.

The Solution

The app turns Reddit into a responsible listening, conversation, and demand engine. It helps the company participate like a useful human, not a hidden ad.

Main Differentiator

This is not a generic AI writing tool. It adds context, subreddit norms, risk warnings, scheduling, and human approval around every action.

Main Tabs

Dashboard

Quick overview of subreddits, reply opportunities, drafts, weekly plan, and best actions.

Company Profile

Source of truth for company, product, ICP, pains, competitors, tone, and things to avoid.

Listen

Understand communities first: subreddit fit, lead potential, spam risk, rules, questions, and pains.

Respond to Posts

Find relevant posts, explain why they matter, draft helpful replies, and warn about product mentions.

Generate Posts

Create Reddit-native drafts like lessons, checklists, research summaries, and honest questions.

Scheduler

Plan approved posts for future publishing so the company does not post everything at once.

Strategy

Weekly playbook: where to comment, where to post, how to build trust, and what to avoid.

Safety Principles

- Listen before posting.
- Commenting is safer than posting.
- Never auto-post without approval.
- Never pretend to be a fake customer.
- Warn when something may look spammy.

Next Steps

- Connect Reddit API and OAuth.
- Store profiles, drafts, schedules, and tracking in a database.
- Add real LLM generation for replies and posts.
- Track comments, engagement, and reply opportunities.

Enable approved scheduled posting later.
